

INTRODUCING THE NEW

CAFFEINE-FREE 24-HOUR ENERGY BOOST

BUT YOU WON'T FIND IT IN ONE OF THOSE
LITTLE BOTTLES BY THE COUNTER ON
CONVENIENCE STORE SHELVES.

The new energy boost is in the form of clean, green renewable energy – electricity made from landfill gas – being generated at the new Chrin Green Energy Park Complex in Glendon that was just dedicated under a picture-perfect Lehigh Valley blue sky.

We are honored to be part of this project that is providing locally-produced clean renewable energy to the power grid, preventing the release of tons of carbon dioxide to the environment, and reducing our dependence on foreign oil. Thank you to our great partners in the project, Pennsylvania DEP Secretary Michael Krancer and his Department, and all the local, county, state, and federal officials who helped make it a great green day for the Lehigh Valley.
